

LearnSphere

An Online Learning Platform for Learners & Admins

Week 1 Deliverable — App Proposal, Wireframes & GitHub Setup

Prepared by: Tejashwini

Submission Window: Jun 30, 2026 – Jul 3, 2026

1. App Proposal

1.1 Purpose of the App

LearnSphere is a mobile e-learning platform that helps learners discover, enroll in, and complete structured skill-building programs (courses), while giving admins a simple way to create and manage that program content. The core problem it solves: learners often struggle to find trustworthy, well-structured programs in one place, and tend to drop off midway due to a lack of clear progress tracking, while program creators/admins lack a lightweight way to publish and monitor content without heavy tooling.

The Week 1 goal is to define this problem clearly, plan the core user flows, and lay the design + technical foundation (wireframes + Flutter project + GitHub repo) before any screens are coded in Week 2.

1.2 Target Users

User Type	Description	Primary Goals
Learner	Students / working professionals looking to build a skill through a guided program.	Discover relevant programs, enroll, track progress, earn certificates.
Admin	Program creators / platform managers who publish and maintain course content.	Create/edit programs, monitor enrollments & learner progress, maintain quality.

1.3 Key Features (Planned)

Learner-facing features:

- Sign up / Login (email + social login)
- Home feed with continue-learning, categories, and recommended programs
- Program listing with search and filters (category, level, duration)
- Program details screen — curriculum, ratings, instructor info, Enroll action
- Progress tracking per enrolled program
- Certificate generation on program completion
- Learner profile & settings

Admin-facing features:

- Admin dashboard with enrollment & activity overview
- Create / edit / delete programs and curriculum modules
- View learner list per program and track completion rates
- Manage categories and featured programs

1.4 Short User Journeys

Learner Journey — "Sonia wants to learn Data Analysis"

1. Opens the app and logs in with her email.
2. Lands on Home, sees a "Data" category and taps it.
3. Browses the Program Listing screen, filters by "Beginner" level.

4. Opens Program Details for "Python for Data Science," reviews curriculum and ratings.
5. Taps Enroll Now, and the program appears under her progress tracker.
6. Returns over following days via the Home screen's "Continue where you left off" card.

Admin Journey — "Rahul wants to publish a new program"

7. Logs in with an admin account and lands on the Admin Dashboard.
8. Taps "Create Program," fills in title, description, category, and duration.
9. Adds curriculum modules one by one.
10. Publishes the program, making it visible on learners' Program Listing screen.
11. A few days later, checks the dashboard to see enrollment count and learner progress for that program.

2. Wireframe Designs

Low-fidelity wireframes for the four core screens are shown below. They outline basic layout — navigation bar, buttons, text areas, and form fields — without visual styling, to focus on structure and flow before UI development begins in Week 2.

2.1 Login Screen

The wireframe shows a mobile app interface for 'LearnSphere'. At the top, there's a status bar with '9:41' and '100%'. Below it, the app name 'LearnSphere' is centered. A placeholder for a profile picture is shown as a grey square with the text '[holder]'. The main heading is 'Welcome back' with the subtext 'Log in to continue learning'. There are two input fields: 'Email' with the placeholder 'you@example.com' and 'Password' with a masked password '*****'. A link 'Forgot password?' is to the right of the password field. A large black button with white text 'LOG IN' is centered below the fields. Below this is a horizontal line with 'or' in the center. Underneath is a button that says 'Continue with Google'. At the bottom of the main content area is a link 'New here? Create account ->'. The bottom of the screen features a navigation bar with four icons and labels: 'Home', 'Programs', 'Progress', and 'Profile'.

Fig 1. Login screen — email/password fields, primary CTA, social login, sign-up link.

2.2 Home Screen

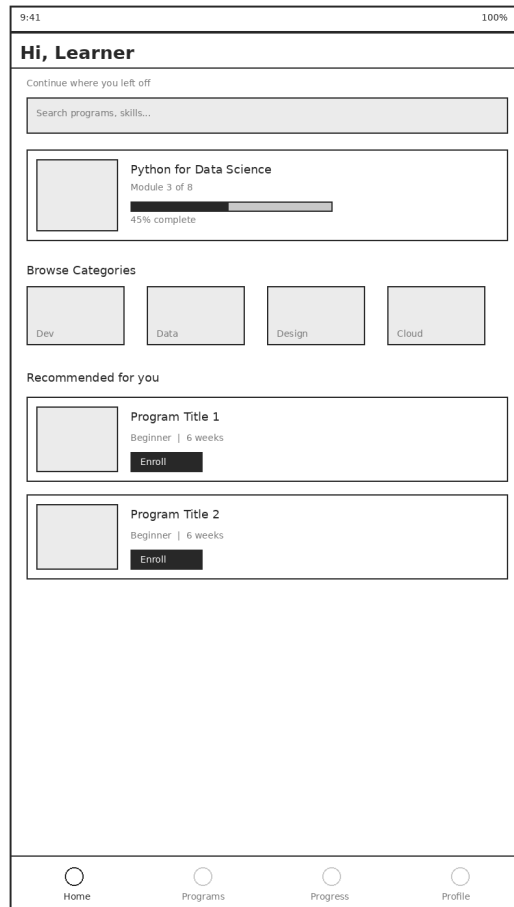

Fig 2. Home screen — search bar, continue-learning card, categories, recommended programs.

2.3 Program Listing Screen

Fig 3. Program Listing — search, filter chips, and scrollable program cards.

2.4 Program Details Screen

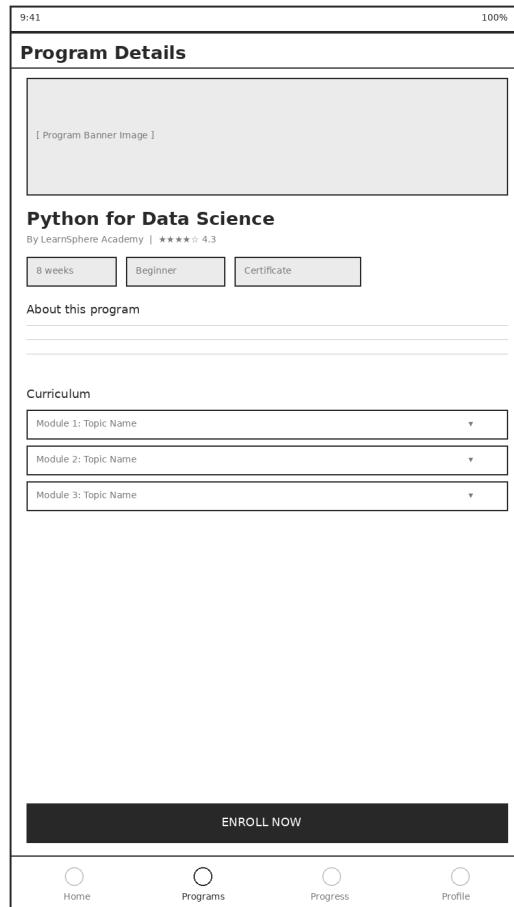

Fig 4. Program Details — banner, meta info, description, curriculum accordion, Enroll CTA.

Note: These wireframes were built as low-fidelity layout sketches. Editable versions can also be recreated in Figma/Whimsical for Week 2 high-fidelity design work.

3. GitHub Repository Setup

3.1 Repository

Repository name: learnsphere

Repository link: [ADD YOUR GITHUB REPO URL HERE after creating it, e.g. <https://github.com/<your-username>/learnsphere>]

3.2 Initial Flutter Project Folder Structure

```
learnsphere/
├── lib/
│   ├── main.dart
│   ├── models/           # User, Program data models
│   ├── screens/          # login_screen.dart, home_screen.dart, ...
│   ├── widgets/          # reusable UI components
│   ├── services/         # auth_service.dart, program_service.dart
│   └── utils/            # constants.dart, theme.dart
├── assets/
│   ├── images/
│   └── fonts/
├── test/
├── pubspec.yaml
├── .gitignore
└── README.md
```

3.3 README Summary

The repository README includes: the project vision (connecting learners with skill programs while giving admins simple management tools), objectives, a target-user table, and the navigation flow diagram (Splash → Login → Home → Program Listing → Program Details → Enroll, plus the Admin Dashboard branch). Full README content is included in the delivered project ZIP as README.md.

3.4 Version Control — Commands Used

Steps to initialize the repo and push the first commit:

```
# from inside the learnsphere/ project folder
git init
git add .
git commit -m "Initial commit: Flutter project structure + README"
git branch -M main
git remote add origin https://github.com/<your-username>/learnsphere.git
git push -u origin main
```

After pushing, take a screenshot of the GitHub repository page (showing the commit history and folder structure) and paste it below as evidence.

4. Week 1 Checklist

Deliverable	Status
App Proposal (purpose, users, features, user journeys)	Done ✓
4 Low-fidelity wireframes (Login, Home, Listing, Details)	Done ✓
Flutter project folder structure	Done ✓
README with vision, objectives, navigation flow	Done ✓
GitHub repo created + pushed with first commit	Action needed — follow steps in 3.4
